

Dispos-a-Glove®

Synthetic examination gloves

The non-vinyl and non-latex choice, ideal for many procedures

Today's healthcare professionals are aware of the risks of allergic reactions linked to natural rubber latex, for themselves as well as for their patients. In order to minimise these risks, many healthcare professionals in and outside the hospital environment have turned to synthetic gloves.

Pioneering in this area, with our Synthetic Glove Program, Ansell has developed a full range of synthetic examination gloves which offer a safe, effective and comfortable alternative to natural rubber latex.

- Made from copolymer materials (Ethylene Vinyl Acetate Film)
- Good tactile sensitivity
- Presented on a backing paper for easy donning
- Available in sterile and non sterile versions.

Not for sale in Germany and France.

Applications

- Daily examination procedures for healthcare professionals and patients who are allergic to latex.
- Low risk procedures.
